Anambra State Floods, Gully Erosion & Related Incidents: 2025–2026 Statistics

Nov 9, 2026 · Chinmeri

At a glance

Floods and gully erosion in Anambra between January 2025 and early November 2026 were frequent but, compared with the 2022 and 2024 seasons, smaller in scale. The largest single recorded displacement was **over 5,000 people** in the 7 October 2025 flash flood. Erosion remains the bigger long-run threat: the state counts **about 1,000 erosion sites, 62 of them critical**.

Indicator	2025	2026 (to 9 Nov)
Recorded flood deaths (Anambra)	1 (Nnewi, 7 Oct flash flood)	1 (6-year-old pupil, Awka, 22 Sep)
Largest single displacement	5,000+ (urban flash flood, 7 Oct)	3,500+ (Ogbaru riverine flood, Sep)
NEMA dashboard, Anambra	6,296 affected, 1,050 displaced	Not published by state
NEMA dashboard, Nigeria	433,578 affected, 144,790 displaced, 241 deaths (Nov)	673,350 affected, 214,997 displaced, 245 deaths (20 Oct)
Erosion sites (state figure)	Over 1,000 active	~1,000 geo-referenced; 62 critical, 550 very active
Land ravaged or threatened by erosion	Over 70% (state Ministry of Environment)	Over 70% (Commissioner, Sep); over 30% affected (Governor, Aug)

Scope and method. Figures come only from federal and state agencies (NEMA, NIHSA, Anambra SEMA, the state government), the News Agency of Nigeria, national newspapers and one peer-reviewed study. Each is linked in Sources. The widely circulated "651,053 displaced" figure is from the **2022** flood and is excluded.

Floods in 2025

2025 brought urban flash floods, not the mass riverine displacement of 2022 or 2024. NIMET's 2025 Seasonal Climate Prediction had listed Anambra as high risk, and NEMA ran a full-scale flood simulation in Ogbaru in June. By November, NEMA's national dashboard put Anambra at 6,296 people affected and 1,050 displaced. That is about 1.5% of the 433,578 affected nationwide.

Date (2025)	Location (LGA)	What happened	Recorded impact
28 Dec	Ogbaru Federal	NEMA, the Red Cross and the local	Number of

Date (2025)	Location (LGA)	What happened	Recorded impact
	Constituency	emergency committee distributed food relief to flood-hit communities	beneficiaries not given
Nov	Statewide (NEMA dashboard)	Year-to-date state totals	6,296 affected; 1,050 displaced
7 Oct	Ogidi, Obosi, Amawbia, Awka (Ngozika Estate), Nnewi, Ozubulu	About 7 hours of rain (4 a.m. to 11 a.m.); SEMA blamed blocked drains	5,000+ displaced; 1 death; 3 injured; 40+ vehicles submerged
3 Oct	Onitsha North and South	NEMA distributed relief to victims of a recent flood (Three-Three community)	Number affected not given
Early Aug	Ogbaru	River Niger rise flooded houses and farmlands	Not quantified
21–22 Jun	Ogbaru	NEMA full-scale flood simulation (preparedness, not an incident)	—
Early Jun	Onitsha	Flood destroyed shops and goods in a commercial district	Not quantified

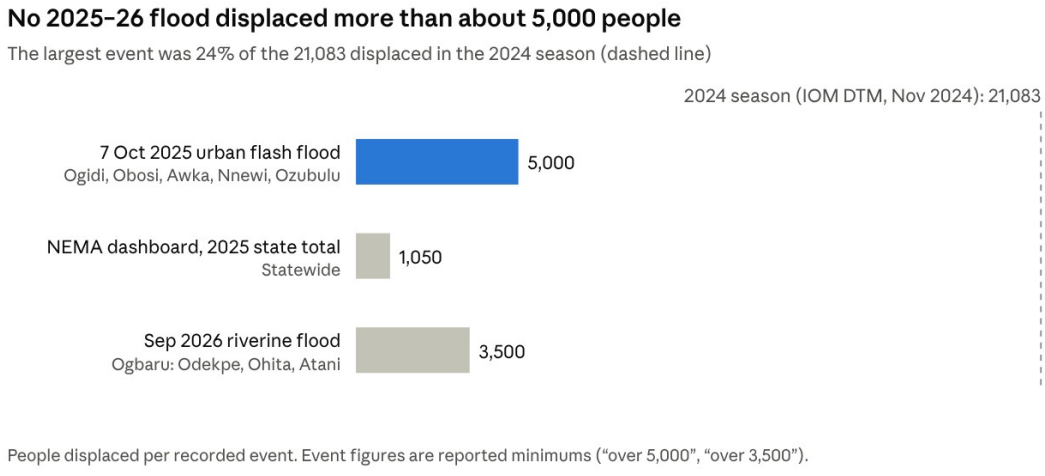

The 5,000+ displaced on 7 October exceeds the dashboard's 1,050 for the whole year. The sources do not explain the gap, so treat the dashboard figure as a minimum.

Floods in 2026

The 2026 season peaked in late September, with one child killed in Awka and more than 3,500 people displaced in Ogbaru. NIHSA's 2026 Annual Flood Outlook ranked Anambra among the 10 highest-risk states and Onitsha as an urban flood hotspot, with 52 road sections at risk. NEMA's national dashboard (20 October) does not break out an Anambra total in published reports.

Date (2026)	Location (LGA)	What happened	Recorded impact
7 Nov	Ogbaru: Ossamala, Obeagwe, Akili-Ogidi, Ogwuikpele, Ogwuanocha, Umunankwo	NEMA relief for this year's flood victims	400 bags rice, 400 bags beans, 200 cartons spaghetti, 50 oil, 50 seasoning
15 Oct	Federal (Senate)	Senate urged emergency federal intervention for flood- and erosion-hit communities in Anambra and neighbours	Senate committees given 30 days to inspect and report
~25 Sep	Ogbaru: Odekpe,	River Niger rise plus heavy	3,500+ displaced; ~500 ha

Date (2026)	Location (LGA)	What happened	Recorded impact
	Ohita, Atani	rain (NEMA/SEMA joint assessment)	farmland affected; no deaths or injuries
22 Sep	Awka South: Nibo–Isiagu (Ring Road)	Flash flood trapped a school vehicle	1 death (Success Ezenwafor, 6); 9 rescued (7 pupils, 2 adults)
22 Sep	Awka	Flooding and erosion after torrential rain	About 3 houses collapsed into a gully; occupants displaced
19–25 Sep	8 LGAs: Awka South, Awka North, Anambra East, Anambra West, Ogbaru, Aguata, Anaocha, Ayamelum	NIHSA high-risk riverine flood advisory for 15 states	Advisory, not an incident
11 Sep	River Niger communities	NEMA/SEMA/Red Cross river-level inspection	Level rising but within safe limits
13 Aug	Idemili North: Obosi (Ugama), Nkpor (Umusiome)	Heavy downpour; landslide and flooding (see erosion section)	Houses, land and farms lost; no deaths reported

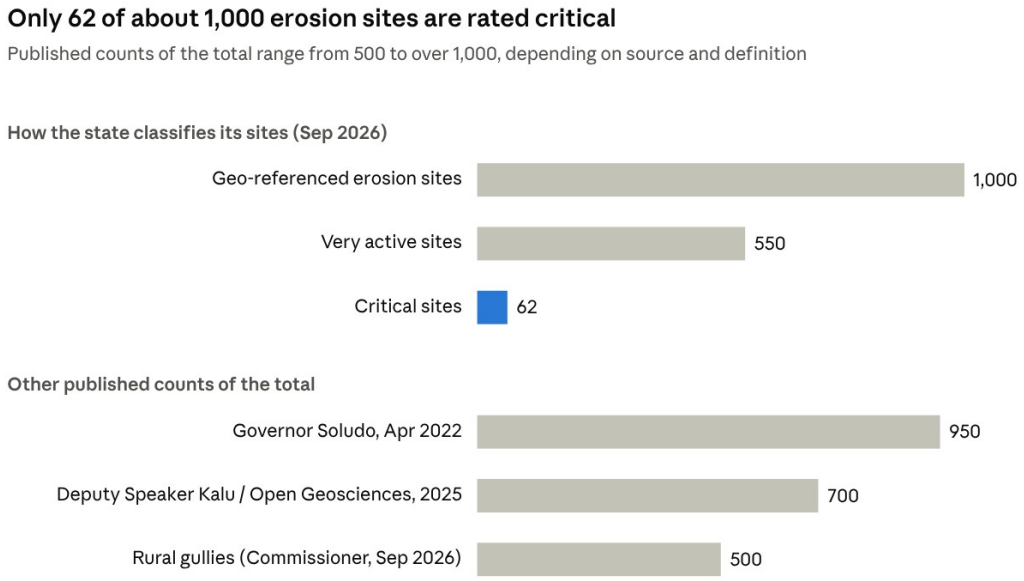

Sources: Radio Nigeria (10 Oct 2025); NEMA dashboard via TheCable (Nov 2025); NEMA via NAN (25 Sep 2026); IOM DTM post-flood report, Anambra (30 Nov 2024)

Both years were far milder than 2024. The IOM-NEMA joint assessment counted 54,422 people affected and 21,083 displaced across seven LGAs that year.

Gully erosion and landslides, 2025–2026

Erosion is Anambra's most persistent hazard. In September 2026 the state put it at about 1,000 geo-referenced sites, 550 very active and 62 critical, and said the 62 critical sites alone need over ₦17 billion. Governor Soludo declared a state of emergency on the environment on 27 August 2026. About 160 of the state's 179 communities face gully erosion risk (ANSEWCCA).

Sources: Anambra Commissioner for Environment via NAN/Gazette (15 Sep 2026); ThisDay (Jun 2025); The Guardian; Open Geosciences (Aug 2025)

Date	Location (LGA)	Recorded impact
Sep 2026	Awka	About 3 houses collapsed into a gully after torrential rain; occupants displaced
Sep 2026	Oraifite (Ekwusigo): Obiofia Ibolo	At least 7 houses destroyed
Sep 2026	Ezi-Awka Community Secondary School	2 classroom blocks destroyed; 4 more and the staff room threatened
Jul–Sep 2026	Iyienu University Teaching Hospital, Ogidi (Idemili North)	Parts of the perimeter fence destroyed; about 10 buildings threatened
13 Aug 2026	Obosi, Ugama village (Idemili North)	Gully and landslide over 400 m long, reaching the Idemili River; houses and land lost; no deaths
Jul 2026	Enugwu-Agidi (Njikoka) and	Communities report worsening gullies threatening

Date	Location (LGA)	Recorded impact
	Ogidi	homes
27 Dec 2025	Enugwu-Nanka (Orumba North)	Over 200 families displaced; over 1,000 plots of land lost

The deepest gullies are on the Agulu–Nanka–Oko–Ekwulobia corridor, up to 120 m deep and 2 km wide. Mitigation under way includes a ₦1.4 billion federal Ecological Fund contract at Alor and Nnobi (Idemili South) and a ₦9 billion World Bank-backed NEWMAP project covering six sites. These include Enugwu-Ukwu, Nnewi-ichi and Ire-Obosi.

Data gaps and caveats

- **No consolidated 2026 state total.** NEMA's dashboard (673,350 affected nationally as of 20 Oct 2026) has no published Anambra breakdown, and SEMA has released none. 2026 figures here are per-event.
- **Dashboard vs event counts disagree.** NEMA's 2025 Anambra total (1,050 displaced) is lower than the single 7 October event (5,000+). The 2025 dashboard figure is reported by TheCable; NEMA's dashboard page itself could not be opened.
- **Erosion site counts depend on definition.** "Sites", "active sites" and "gullies" are counted differently. The Open Geosciences study (Aug 2025) notes researchers' conflicting counts.
- **Land share.** "Over 70%" (Ministry of Environment) means land ravaged *or threatened*; Governor Soludo's "over 30%" (Aug 2026) refers to land already affected.
- **2026 outlook figures** (top-10 risk, 52 road sections, Onitsha hotspot) come from NIHSA's 2026 Annual Flood Outlook as summarised by HEDA's state flood guide; the full NIHSA report was not opened.
- **Excluded:** the 651,053 displaced (2022 flood) and 54,422 affected (2024 DTM) figures, except as the 2024 benchmark on the chart.
